

Swiss Market Maker

CORPORATE PROFILE

Through the extensive network of partners, we manage to create a unique synergy which in turn effects and aids in establishing new paths in the financial market

Swiss Market Maker

To support your business with passion

Swiss Market Maker & Securities AG is a young company and source of data in the Private Equity environment. This company publishes quotes and market data regarding the instruments traded at over-the-counter (OTC) markets through recognized market data systems.

We advise and support companies on their way to raise the OTC-capital. Our team, which consists of competent finance specialist accompany you throughout the entire process of raising the capital right up to the successful implementation.

The financial business of today as well as of tomorrow can become more intelligent and efficient through our solutions. Due to the exceptionally high standards that we set for ourselves every day, we can permanently inspire our clients

Our Services

Swiss Market Maker

*Over-the-counter
listing*

*Daily reporting of
valuation rates*

The valuation rate is fixed daily. While the exchange rate may be the same with the closing rate, it is often calculated using the last sales on the related day.

Quotes and market data provide parameters and guiding information for depositors and investors.

With our offers that we make through publication, every day, you can reach millions of people actively following the events on financial markets. The information is sent appropriately to the exact target group, i.e. depositors, consultants, marketing organizations, and all people that are professionally or privately interested in the financial sector.

Swiss Market Maker

Advantages of OTC Listing

A listing results in the following opportunities for companies:

✓ ***Opening towards investors***

The OTC listing offers the companies the possibility to open up to a broad public with minor financial expenditure.

✓ ***Potential procurement of equity capital***

An attractive company with positive future prospects has, through a listing, an opportunity to generate additional equity capital.

✓ ***Enhancement of the Company's name recognition***

By means of a listing, a company is able to accelerate interests of the media and thus of the public as well – and consequently to enhance attractiveness.

✓ ***Guiding towards a probable quotation at a traditional stock exchange***

The listing offers the companies the possibility to gain experience in the public stock trading and thus to prepare for an eventual quotation at a traditional stock exchange.

✓ ***Eventual inclusion in the portfolios of institutional depositors***

Due to the transparency and liquidity, securities of any companies, which have been recognized less or not at all so far, become an investment option and category to be taken seriously for professional depositors as well.

✓ ***Eventual succession arrangement***

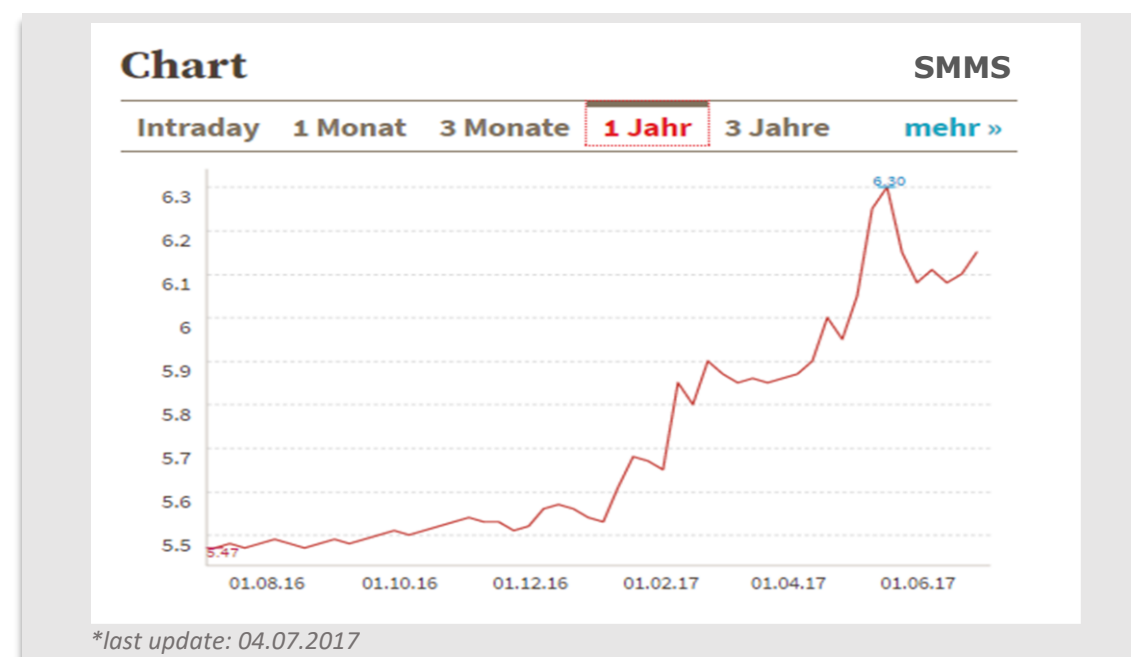

By means of a listing, a good opportunity is offered to actively approach the succession arrangement, which may especially be advantageous for owners of a family business. With a listing, the business opens up to the public – depending on the scope of the publicly traded stock share – to a minor or major extent.

Financial Revolution

Blockchain

The 21st-Century trading has begun. The new technological development called Blockchain will radically transform the financial industry.

The Blockchain, or in other words, the “Internet of the Values” transports the cryptocurrency papers and securities directly from User to User. Transactions can be executed over the Internet at any time desired, independent of the country and banks.

As one of the first enterprises around the world we decided to transform a part of the shares of Swiss Market Maker & Securities AG into the digital crypto currency, which are based on NEM technology. The shares can be traded with crypto currency on the platform Private Equity Quote.

NEM Technology

NEM – New Economy Movement- is a decentralized blockchain data network, which is encoded and communicates among each other. Financial institutions can reduce their costs several times while the security of financial transactions grows.

As one of the first information service companies, the Swiss Market Maker & Securities AG transfers real financial data to the emerging crypto-market. The process is carried out on the data system from the NEM technology.

The blockchain will change everything. We have adopted this brilliant technology and it will revolutionize the financial market.

Welcome to the trading of the 21st century!
